Valueing a Diamond.

New York bun.

There were five or six of "us boys" i coach on an Erie train one day la summer, when a young man wearing a blg diamond pin came in. As he seem to take special pains to show off we presently began to talk about diamonds and now people were deceived in them, and he at once cocked up both ears and became interested. The agent of a Buffalo wall paper house had a magnifying glass with him, and we selected him as an expert to test what jewelry we could pass up. He passed all the stones as lair to medium, and then the stranger came forward and said:

"I'd like your opinion on this stone. I got it at what I consider a bargain."

"Do you call this a diamonu?" asked our "expert" after a long look through the glass. to take special pains to show off we pre

The stranger was knocked all to pieces by the inforn a ion and after considerable swearing he went off and sat down by himself. At Salamanca he saw some one on the platform he know and hurried out to speak with him. When hereturned the pin was gone, and one of crowd asked if he had lost it.

"For practical reasons. It would lessen our facilities. Long before there was any law on the subject we tried the underground system and found it unsatisfactory. Fifteen years ago we had underground connection with the Stock Exchange and with all the newspaper offices in order to give the system a fair test. The difficulty lies in the retardation of the current. A wire underground or under water is far less active that one in the air. Take an ocean cable for example. One small wire connected with a cable will do as much work as four such cables. By our cables we can send only twelve words a minute, owing to this retardation. We are told in philosophy that a beam or lever is only as strong as its weakest part. See how it applies to our business. We have a wire of No. 6 gauge from here to Philadelitic Tar wiles of it disappears and we "Why do you oppose the underground strong as its weakers pair. See now as splits to our business. See it grow ! You won't have to look back far. 1877 was the year when Pearline started in to take charge of washing and cleaning. It was a new idea; people didn't know about it; when they did find out, they were afraid of it.

But look at it now. Every year has been a big advance on the year before — and 1890 a bigger advance than ever.
It's the biggest year, against the biggest opposition—smoothongued peddlers to fight against, cheap prices and poor juality, prize packages, imitations of all sorts. But Pearline tarted ahead and has kept there-and now it's farther thead than ever.

A poor thing can't grow like this. A dangerous thing can't. Find out for yourself why Pearline grows. Ask about it of some one who is using it.
